A lot of redundancy in wiring can create some problems later on. The GXT760VP4 features the standard 22 GMRS Channels with an extra 20 Channels and a range of up to 36 Miles. The Weather Scan feature finds the nearest NOAA broadcast to stay up to date with the latest weather and hazard information. In addition to important weather announcements, All Hazards Alert means the GXT760VP4 will receive other emergency announcements such as Child Abduction Amber Alert, Nuclear Power Plant warnings, Biological Hazard, Fire, and Landslide Warnings. Unlike other GMRS radios on the market that use lithium batteries, Midland's Dual Power Option allows the use of the included rechargeable batteries or 4 "AA" batteries Not included. An External Jack can be used for the Midland AVP1 AVPH1, AVPH2, AVPH3, AVPH4, AVPH5 Headsets. The standard 22 GMRS channels and an extra 20 boast a range of up to 36 miles. The GXT760VP4 features threelevel eVox for handsfree operation, 142 privacy codes, channel scan, ten distinct call alerts, keypad lock, and more. Up to 36 Mile Range Get a longer range of communication.

Maximum range can only be achieved over water or open rural areas under optimum conditions; FCC license required. 142 Privacy Codes A wealth of privacy codes means you get up to 3144 channel options, to help you block other conversations. Channel Scan Automatically check all channels for activity. The radio stops on any active channel for four seconds before resuming. Ten Call Alerts Use different call tones to notify you of incoming calls within your group. Weather Scan Easily scan the active weather channels in your area with Weather Radio scan. The radio will stop on any active channel.Five sensitivity levels allow you to set the threshold at which your voice is detected. Mic and Headphone Jacks Features accessory jacks for Midland's AVP1, AVPH1, AVPH2, AVPH3, AVPH4, AVPH5 Headsets. Auto Squelch Remove background noise caused by interference or weak transmission with Auto Squelch. Keypad Lock Locks in your selected settings so you avoid accidentally changing them. Keypad Lock Locks in your selected settings so you avoid accidentally changing them. Roger Beep An optional Roger Beep indicates call completion. Once the PTT button

is released, the radio will beep to confirm to other users that your transmission has finished. Bright Backlit Display The unit's brilliant LCD is easy to read, day or night. Known in the '70s primarily for CB radios and household electronics, Midland has grown with the times by producing innovative new communications products and by actively promoting public emergency preparedness. Midland has manufactured quality TwoWay Radios for the last 50 years and is a market leader in several individual categories. What's in the Box Pair of Midland GXT760VP4 Radios, Pair of Headsets, Belt Clips, Desktop Charger, Rechargeable Batteries, AC Wall Adapter, Owner's Manual To find out more, including how to control cookies, see here. Never to be a victim of car thieves, keep your car away from those troublesome cases!! This top system is manufactured by Carvox, assuring of high reliability and quality.To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later.All the feature work without problems IF hooked up properly. Had mine for several years, satisfied customer. Thats okay. For some sites, we do too. However several sections and

features of our Please consider disabling your ad blocker on our site and help support Thanks in advance! It has numerous names so pay attention to the remote, features, and the control box. BE WARNED this is a complete waste of money, good news is I found a good place for this product after spending 250.00 to have it installed and another 250.00 labor to get a Compustar installed!!!

Any suggestions as it cannot be used and we double checked the wiring as well the Manager of the Installation company said there is something wrong with the control unit. Everything works fine however the system arms itself and then alarms randomly after a few hours in a secured garage. How much is a recentment brain as we have confirmed wiring and that the auto arm is disabled. The Ebay vendor is refusing any help. Randy All the wiring plugs align from the X6A to the older 3300 replacement with the exception of the prox antenna for the unlock proxy feature. The unit powered up correctly however it will not sync to any of the remotes. When I power up the unit and observe the 5 pulses thru the system led 5 presses of the valet switch and press the 2 keys required on the remote for a sync no confirmation is sent back as it always does like from the old X6A when I sync a remote. Any idea why none of the remotes can be programmed to the 3300 unit. Appreciate any help here, as I have really had some challenges with this product such as the dome light staying on for 20 secs after turning off my vehicle and if you try to arm the Carvox the dome light sets off the siren same as the car starter turning off the vehicle after 15 mins which also triggers the siren because of the dome light The factory remote will immediately turn off the dome light and if I pull the X6A unit fuses the dome light goes out immediately after closing the doors unlike with the Carvox being powered up Randy As recommended I had a local Alarm Shop install the system for 250.00. Immediately I noted problems with the system so I contacted the installer to which I was assured all connections were correct and soldered. I am a Sales Engineer and have an electronics background so I decided to inspect the work and use my Fluke multi meter to confirm the output voltages of the vehicles wiring harness and the Carvox wiring and the programming of the brain.

Everything matched the schematic, at that point I contacted the Ebay Seller and was totally ignored when I requested assistance. I had felt confident enough to order a 3rd 2 way 3300 style remote. I then contacted Carvox in the US and ordered a spare brain. I was shipped a 3300 brain however when the X6A continued to act erratically I swapped out the X6A brain with the 3300 unit. With the exception of the 2nd SMA connector it was straight forward however when I attempted to sync the remotes all 3 failed to register. Immediately I swapped back to the X6A brain and was able to quickly register all 3 remotes. So at this point I have 2 brains that do not work, no support, and an expensive SUV with no alarm protection and no remote starter. When the Carvox X6A did operate somewhat correctly I noticed that when I shut off my vehicle and closed the door the dome would stay on for around 20 secs. This results in the alarm being set off. I am unable to find any way to shorten the timer and when I remove the brain the dome light goes out immediately. I have spent considerable time, 250.00 for an install and am now forced to completely remove the Carvox unit and go to a basic Viper Alarm for even more money. I really was impressed with the range and features and was bragging about the features a Carvox to friends and coworkers with CompuStars now they just tease me as I have no functions. Sincerely, Randy Any suggestions as it cannot be used and we double checked the wiring as well the Manager of the Installation company said there is something wrong with the control unit I have a bridge i can sell you in New York if you are interested. Mike M2The old saying goes, if it looks too good to be true it probably is. Mike M2That was their mistake! Any user assumes the entire risk as to the accuracy and use of this information. Please. The following is a list of episodes for the Disney Channel series Kim Possible.

A car alarm is an electronic device installed in a vehicle in an attempt to discourage theft of the vehicle itself, its contents, or both. In mathematics, the repeating decimal 0. This notification is given out when some door is not closed properly or if your car has a dome light delay. Press Button once The siren chirps once. The system is armed. All zones are active. LED indicator blinks once and

then pauses for 2. Press Button a second time within 5 seconds The siren chirps once again. The shock sensor zone is now bypassed. You may select whether disarm and unlock doors when trunk released by options. The switch must supply a ground output when switch is opened. This input will disable or shut down the remote start when the hood is opened. Due to the complexity of this system, installation must only be performed by an authorized dealer. Door Status Warning Programmable switch The lights will flash to inform you that some door is not closed well. Well assume youre ok with this, but you can optout if you wish. I have put together a basic wire diagram from a 9698 civic. I did not make the diagrams myself just joined them. If I give my car gas and rev it up to say 3,000 RPM it is well over 8V though. Connect this wire to the hood pin switch, the switch must supply a ground output when the switch is opened. This input will disable or shut down the remote start when the hood is opened. It will also trigger the security system if the hood is opened while the system is armed. Left unhooked, shouldn't need, no hood pin yet came with alarm, I will get one later so people don't steal parts out from under my hood.. The brown wire is a safety shutdown wire that must be connected. Left unhooked, shouldn't need, I am not even sure what the purpose of this wire is, so if the break is pushed what shuts down exactly when this is hooked up There are a few connection I dont know where to plug in. in red Amazon and the Amazon logo are trademarks of Amazon.com, Inc, or its affiliates.
